

Science Seminar Updates: Only TWO more presentations!

- NEW: The presentation more research-based and detailed, providing a hand-out to your classmates in which to guide note-taking
- 3rd marking period: **Pollution & a solution**
 - Describe a pollutant, where it comes from, what problems it causes, and how we can clean it up, either by discussing a **regulation** (an environmental law) that deals with it) or **Geoengineering** (a temporary technological fix)
- **Make a powerpoint AND a handout**
 - I will photocopy it for your classmates

Requirements

- **Presentation slides**
 1. What the pollutant IS
 2. Causes?
 3. Effects?
 4. Solutions
 - A specific regulation (law) OR Geoengineering technology and how it works
 5. Works cited list (> 3 resources)
- **Handout: ½ to 1 full page**
 - Make “guided notes” for your peers so they don’t need to scribble down all the information.
- You will have a “pollution test” based on the class presentations!
